The Israeli Seminar on Computational Linguistics, ISCOL'03

Technion, Haifa
Wednesday, December 17th, 2003

Computational linguistics and natural language processing are active research fields in Israel today, as well as popular areas of activity in industry. The Israeli Seminar on Computational Linguistics is a venue for exchanging ideas, reporting on work in progress as well as established results, forming extramural corporations and advancing the collaboration between academia and industry. This year's meeting is a sequel to ISCOL'01 which took place at the University of Haifa on February 2001.

This year the Seminar is held in honor of Professor Uzzi Ornan for his 80th birthday. We also take this opportunity to inaugurate the recently created Knowledge Center for Processing Hebrew.
