Early stage funded startup in the mobile - video domain is looking for Computer Vision Developer.
As part of our solution we are developing a real time object based foreground extraction algorithm.

The Developer will lead the algorithmic development including design, coding and deployment.
requirements:
- Great communication skills
- MSC/BSC in Computer Science with expertise in Image processing/computer vision
- Proven experience with one of the following : Image processing, object identification, tracking and classification or pattern recognition.
- Coding skills in C++ is a must
- Experience with OpenCV is a big plus
- Startup can do approach is a must!

Huge opportunity to take a major part in cutting edge development of a new product from its early stages.
