SOCIAL-MOBILE-CLOUD MEETS
MEDICINE @ TECHNION

December 17th, 2013
Technion, Haifa

Organizers
Deborah Estrin (CS, Cornell NYC Tech), Shie Mannor (EE, Technion), Uri Rosenschein (Medical School, Technion)

The world around us has been transformed by the brave new world of Social (networks) – Mobile (smart phones). The phenomenon of ubiquitous programmable, hand held sensor platforms (our phones), streaming continuous and diverse personal information to be stored and analyzed in the "cloud" has already transformed how we run our lives, and will soon transform how we take care of our lives. The ability to use intelligent algorithms to draw inferences from these data, to fuse them with other data (from genomic to geospatial), and to connect even more sensors to these devices, offers tremendous opportunity for data driven insight into patient care across a wide array of health conditions.

The objective of the meeting is to bring together innovators from both IT and Medicine and explore the potential implication of the social-mobile-cloud reality on patient care.

Confirmed Speakers
Ofer Ariely (Medial)
Uri Goren (e-pochondriac)
Eyal Lifshitz (Peregrine)
Anmol Madan (Ginger.io)
Avi Mandelbaum (Technion)
Gideon Mantel (Treato)
Joachim Meyer (Tel Aviv University)
Avi Mendelson (Technion)
Ariel Miller (Faculty of medicine, Technion)
Eben Moglen (Columbia University)
Mor Peleg (Haifa University)
Lior Wolf (Clalit Health Service)
Elad Yom-Tov (Microsoft Research Israel)
Benny Zeevi (IATI)
