Postdoctoral position in Cornell University

Postdoctoral position for the period of two years is immediately available at the School of Applied and Engineering Physics, Cornell University. The research in the area of NEMS (Nanoelectromechanical systems), more specifically nano oscillators and oscillators arrays for mass and bio sensing applications, is a joint program between Cornell University and Tel Aviv University. Prospective candidates may have background in one or several disciplines: applied physics, micro/nano fabrication or applied/structural mechanics. Background in nonlinear dynamics and computational mechanics is an advantage.
