Position: Automation Engineer

The Software Test Automation Engineer will be a member of the Quality Engineering team and will be responsible for designing test plans, participating in the design and implementation of infrastructure and automatic tests for testing web applications and web services, in addition to manual tests. In addition, he/she will collaborate with Development teams to create and evolve policies, best practices, and testing frameworks for distributed systems testing.

Responsibilities:

- Develop and support new automated testing infrastructure and processes
- Design and implement frameworks for testing Web Services
- Implement automated testing using Java, and/or related technologies
- Maintain high quality code through code reviews
- Identify and document the detailed requirements for testing system needs and functionality

Requirements:

- BS + 2yrs experience, or MS, in Computer Science or equivalent
- Hands on experience writing code and tests in Java
- Demonstrated commitment to quality with a passion for testing
- Strong ability to work independently as well as with highly cross-functional teams
- Superior analytical and problem solving skills
- Excellent oral and written communication skills
- Experience in Quality Engineering, Functional and Automated Testing
- Experience Testing Web Services and/or Distributed/Cloud Computing Environments
- Familiarity with creating web applications (e.g. Ruby/Rails, Groovy/Grails) Experience testing large scale enterprise products
- Knowledge of Integration Design Patterns
