HP Software is looking for students for a team in the Technion!

The product and group:
HP Unified Functional Testing (UFT) is the world leading application for automation of functional testing. Among our customers are large enterprise IT organizations (banks, insurance and technology companies). It is a windows desktop application developed mainly in .Net and involving a variety of technological challenges.
The group consists of 6 teams in Israel and a few offshore teams.

The position:
For the team in Haifa (Technion) we need a bright computer science student in his 3rd year or later. The student should be hard-working, have motivation, high grades and availability for a 50% position. The student will need to work on different aspects of the integration of UFT with other HP products. .Net experience is an advantage.
