Program Manager Intern – Protection Services (PS)

The Microsoft Protection Services team develops cloud services that power Microsoft’s anti-malware protection platforms. Redesigned for a modern highly dynamic malware threat environment that evolves at an ever increasing pace, we leverage Microsoft’s data sources and cloud big data technologies to provide better and faster protection for users.

The Protection Services team is looking for an exceptional intern Program Manager with machine learning and/or data mining experience to take part in our extensive data analytics process. This role will grant you an opportunity to be part of a Program Management team in Microsoft, responsible for driving design, development, and release of Microsoft Windows and Cloud Services.

If you are studying for an advance degree in CS with passion for data mining, and curiosity to discover and evaluate hidden patterns and produce knowledge out of large and complex data sets, look no further.

Qualified candidates:

- Student for M.Sc. degree in a computer science or similar discipline
- Excellent English and Hebrew
- Excellent communication skills
- Must have the ability to think strategically as well as breakdown complex problems
- Expected to act with independent judgment and to be self-initiative
- Practical experience using statistical analysis techniques and building advanced predictive models is an advantage.
