Are you a student with a Computer Science focus and seeking a full time position or an internship? Would you like to learn about a role at Google which works closely with our creative engineers to help design and develop technologies that improve access to the world's information? If you have strong technical skills and a real passion for new technologies, we want to hear from you.

Google is hiring Associate Product Managers for the Israel offices. The Associate Product Manager (APM) Programme is designed for Computer Science graduates and students who are interested in exploring product development and leadership opportunities.

This select group is given broad responsibilities, generous access to resources, visibility into Google's executive team and many opportunities to grow within the organisation. This two year programme combines on-the-job experience with additional training, mentorship, and support from current associates and the rest of the product team.

Check out the following resources to find out more about the Associate Product Manager role:
* Youtube video with Zurich APMs
* Interview with an APM
* Article from Newsweek about the APM programme.

To identify potential candidates for this role, Google will host a Product Design Workshop on Thursday, November 10th between 14:30-16:30 on campus. In the session, participants will scope and design a new product in a team setting and learn more about the APM programme and role. If you'd like to be considered for this workshop, please apply here by Tuesday, November 1. Space is limited, so we may not be able to accommodate everyone. Final confirmation of participation will be sent on Thursday, November 3.

If product management is not your thing, but you are interested in an internship role at Google in software engineering, just send your CV to israeljobs@google.com
