Watch My Heart is a project designed to reduce re-hospitalization of people suffering from a heart condition by allowing their doctor to monitor their day-to-day activities via a smartphone application and identify early signs of a heart condition.

1. Gathering real time statistics from patient’s smart-phone

2. Uploading data to Watch My Heart servers

- Step counting
- Activity classification
- Phone call detection
- Location detection
- Leaving home detection

3. Doctor can monitor patient’s progress and observe any irregularities
